Taurus Energy named best environmental news in November 2010

Taurus Energy AB was named "Best environmental news of the month" in November 2010 by Eco Innovation, stating that Taurus Energy has demonstrated how its pioneering ethanol technology can be transferred from lab scale to industrial scale. Taurus Energy was one out of three nominees in the competition, which was settled in a web poll on ECO Innovation's website.

"More than 75 % of the voters thought that this was the environmental news of the month. No wonder. The step from lab scale to industrial scale yeast production is an important step for Taurus Energy and for the ethanol technology development", says Erik Sandström at Eco Innovation.

ECO Innovation AB is a family-owned consultancy in Jönköping, Sweden. The company offers support in developing project applications for EU funding, expert consultation on EU funding programs, courses and conferences. ECO Innovation also presents articles about EU funding and environmental innovations and appoints Sweden's environmental news of the month.

The other nominees were Peepoo, a company who has developed a self-sanitizing and bio-degradable disposable toilet which can be used as fertilizer, and REHACT, a company focused on lowering energy consumption in properties. For more information, visit (in Swedish):
